

CONTENTS

Introduction	4
1. Main features of a wedge.....	7
2. Interaction of a flat dihedral wedge with soil	10
2.1. Destruction of soil by a dihedral wedge	12
2.2. Formation of a soil layer on a wedge	18
2.3. Movement of a soil layer on a dihedral wedge	20
2.4. Formation of a dihedral wedge during the movement of a harrow tooth in soil	25
2.5. Tractive resistance of a dihedral wedge	25
3. Interaction of a trihedral wedge with soil	29
3.1. Trajectory of soil movement along a wedge	29
3.2. Power characteristics of a trihedral wedge.....	34
3.3. Speed of soil movement along a wedge	43
3.4. Blade of a trihedral wedge.....	45
4. Coverage width of cultivator feet and its optimization	51
5. Angle of soil cutting by a trihedral wedge.....	57
6. Experimental determination of the trajectory of layer motion along a wedge.....	70
7. Influence of a constructive design of working bodies on a technological process.....	78
Conclusion	83
