| <b>Abstract</b>  | <b>v</b>   |
| <b>Glossary</b>  | <b>V</b>   |
| <b>1 Introduction</b>  | <b>1</b>   |
| <b>2 Background Information and Theory</b>                         | <b>3</b>   |
| 2.1 Physiology of the Nervous and Musculoskeletal System . . . . . | 3          |
| 2.1.1 The Nervous System . . . . .                                 | 3          |
| 2.1.2 The Neuron . . . . .   | 4          |
| 2.1.3 Chemical Synapse . . . . .                                   | 5          |
| 2.1.4 The Action Potential . . . . .                               | 6          |
| 2.1.5 Measuring Muscle Activity . . . . .                          | 9          |
| 2.2 Electrical Stimulation of Neural Tissue . . . . .              | 11         |
| 2.2.1 Principle . . . . .  | 11         |
| 2.2.2 Stimulation Parameters . . . . .                             | 12         |
| 2.2.3 Electrode Size and Placement . . . . .                       | 15         |
| 2.2.4 Multi-Channel Electrical Stimulation . . . . .               | 15         |
| 2.2.5 Limitations . . . . .  | 15         |
| <b>3 Simulating Neuromuscular Electrical Stimulation</b>           | <b>17</b>  |
| 3.1 Two-Step Approach . . . . .                                    | 17         |
| 3.2 Finite Element Modeling . . . . .                              | 18         |
| 3.2.1 Electric Potential Calculation . . . . .                     | 18         |
| 3.2.2 Model Geometry . . . . .                                     | 18         |
| 3.2.3 Mesh Dimensions . . . . .                                    | 21         |
| 3.2.4 Model Parameters . . . . .                                   | 21         |
| 3.3 Axon Models . . . . .  | 24         |
| 3.3.1 Passive Axon Model . . . . .                                 | 24         |

|          |   |           |
|----------|---|-----------|
| 3.3.2    | Active Axon Models . . . . .                                    | 29        |
| 3.4      | Motor Axon Volume . . . . .                                     | 33        |
| 3.5      | Pulse Response Calculation . . . . .                            | 37        |
| <b>4</b> | <b>Considerations for Efficient Electrical Stimulation</b>      | <b>41</b> |
| 4.1      | Stimulation Pulse Efficiency . . . . .                          | 41        |
| 4.1.1    | Charge Optimization . . . . .                                   | 42        |
| 4.1.2    | Stimulation Interphase . . . . .                                | 44        |
| 4.1.3    | Stimulation Pulse Selectivity . . . . .                         | 45        |
| 4.2      | Impact of Electrode Geometry . . . . .                          | 48        |
| 4.2.1    | Simulation . . . . .  | 48        |
| 4.2.2    | Experimental Validation . . . . .                               | 50        |
| 4.2.3    | Results . . . . .   | 51        |
| 4.2.4    | Conclusion . . . . .  | 52        |
| 4.3      | Utilizing Array Electrodes . . . . .                            | 53        |
| 4.3.1    | Automatic Electrode Determination . . . . .                     | 53        |
| 4.3.2    | Virtual Electrodes . . . . .                                    | 53        |
| 4.3.3    | Distributed Low Frequency Stimulation . . . . .                 | 55        |
| 4.4      | Design and Fabrication of Array Electrodes . . . . .            | 58        |
| 4.4.1    | Flexible Printed Circuit Board Electrodes . . . . .             | 60        |
| 4.4.2    | Ink-jet printed Array Electrodes . . . . .                      | 60        |
| <b>5</b> | <b>Systems for Electrical Stimulation with Array Electrodes</b> | <b>63</b> |
| 5.1      | Type I Demultiplexers . . . . .                                 | 63        |
| 5.2      | Standalone System for Array Electrode FES . . . . .             | 67        |
| 5.2.1    | Switchbox I . . . . .   | 68        |
| 5.2.2    | Stimulation Protocols . . . . .                                 | 68        |
| 5.2.3    | Conclusion . . . . .  | 69        |
| 5.3      | Type II Demultiplexer . . . . .                                 | 70        |
| 5.4      | Fully Synchronized System for Array Electrode FES . . . . .     | 73        |
| 5.4.1    | MOTIONSTIM 8 . . . . .  | 74        |
| 5.4.2    | Smartstim Adapter . . . . .                                     | 75        |
| 5.4.3    | Switchbox II . . . . .  | 75        |
| 5.4.4    | Stimulation Pulse Timing and Electrode Selection . . . . .      | 76        |
| 5.4.5    | System Control . . . . .  | 78        |
| 5.4.6    | Stimulation Protocols . . . . .                                 | 79        |
| 5.4.7    | Conclusion . . . . .  | 80        |

|                        |   |            |
|------------------------|---|------------|
| 5.5                    | System Comparison . . . . .   | 81         |
| <b>6</b>               | <b>Sensor based Stimulation Control</b>                                   | <b>85</b>  |
| 6.1                    | Stimulation Device Control . . . . .                                      | 85         |
| 6.1.1                  | Sensors and Switches used to Trigger Stimulation Events . . . . .         | 86         |
| 6.1.2                  | Electromyography Triggered Stimulation . . . . .                          | 86         |
| 6.1.3                  | Brain-Computer Interface . . . . .  | 87         |
| 6.2                    | FES Control with Wireless Sensor Systems . . . . .                        | 88         |
| 6.2.1                  | Principle . . . . .   | 88         |
| 6.2.2                  | Flex Sensor Triggered Stimulation . . . . .                               | 88         |
| 6.2.3                  | Electromyography Controlled Stimulation . . . . .                         | 89         |
| 6.2.4                  | Conclusion . . . . .  | 91         |
| 6.3                    | Feedback Controlled Stimulation . . . . .                                 | 92         |
| 6.3.1                  | Simple Smart Pulse Intensity Control . . . . .                            | 92         |
| 6.3.2                  | Calibration based Pulse Intensity Control . . . . .                       | 97         |
| 6.3.3                  | Conclusion . . . . .  | 102        |
| <b>7</b>               | <b>Experimental Findings</b>  | <b>103</b> |
| 7.1                    | Decreasing Effect in NMES of Stroke Patients . . . . .                    | 103        |
| 7.1.1                  | Methods . . . . .   | 103        |
| 7.1.2                  | Results . . . . .   | 105        |
| 7.1.3                  | Conclusion . . . . .  | 106        |
| 7.2                    | Effective Electrical Stimulation using Short Stimulation Pulses . . . . . | 107        |
| 7.2.1                  | Methods . . . . .   | 107        |
| 7.2.2                  | Results . . . . .   | 111        |
| 7.2.3                  | Discussion . . . . .  | 114        |
| 7.3                    | Smart Intensity Control with DLFS - a Demonstration . . . . .             | 116        |
| 7.3.1                  | Methods . . . . .   | 116        |
| 7.3.2                  | Results . . . . .   | 118        |
| 7.3.3                  | Discussion . . . . .  | 121        |
| 7.4                    | General Considerations Regarding Application of FES . . . . .             | 123        |
| 7.4.1                  | Electrode Placement . . . . .   | 123        |
| 7.4.2                  | Patient Training Participation . . . . .                                  | 123        |
| 7.5                    | Experimental Findings - Conclusion . . . . .                              | 124        |
| <b>8</b>               | <b>Conclusion</b>   | <b>125</b> |
