

Contents

Nomenclature	xi
1 Introduction	1
1.1 Motivation	1
1.2 State of the Art in Gas Turbine Combustion	2
1.2.1 Short Helical Combustor	2
1.2.2 Asymmetrically Bounded Swirling Flows	6
1.3 Objectives and Contributions	14
2 Theoretical Background	15
2.1 Computational Fluid Dynamics	15
2.1.1 Governing Equations	15
2.1.2 Modeling of Turbulence	18
2.1.3 Characteristic Turbulent Scales	20
2.2 Fundamentals of Turbulent Combustion	23
2.2.1 Turbulent Combustion Categories	23
2.2.2 Characteristic Scales in Premixed Combustion	25
2.2.3 Regime Diagram for Premixed Turbulent Combustion	26
2.3 Combustion Modeling	30
2.3.1 Mean Reaction Rate	32
2.3.2 Turbulent Flame Speed Closure	32
2.3.3 Schmid TFC Model	32
2.3.4 Pressure Dependence of the Mean Reaction Rate	34
3 Validation of the Numerical Method	36
3.1 Experimental Setup	36
3.2 Numerical Setup	36
3.3 Comparison of Predicted and Measured Flow Fields	39
3.3.1 Mesh Independence Study	40
3.3.2 Combustion Model	45
3.4 Asymmetrically Bounded Swirling Flow	52

4	Global Flow Analysis	54
4.1	Integral Balance of Angular Momentum	54
4.2	Physically Consistent Averaging Method	56
5	Combustor Scaling and Similarity Analysis	62
5.1	Flame Tube Scaling	62
5.2	Burner Scaling	64
6	The Short Helical Combustor Concept	66
6.1	Similarity Study	66
6.1.1	Flow Pattern Similarity	68
6.1.2	Liner Heat Transfer Similarity	71
6.2	Numerical Analysis	72
6.2.1	Numerical Setup	73
6.2.2	The SHC Flow Kinematics	74
6.2.3	The SHC Flow Dynamics	81
6.3	Controlling the SHC Flow via Wall Contouring	85
6.3.1	Effect of the Wall Contouring on the Flow Kinematics	87
6.3.2	Effect of the Wall Contouring on the Flow Dynamics	89
7	Summary and Conclusions	92
	References	94
